Sprint #2 Report

My Fitness Program Distributor

Fitness Team

7/16/19

Actions to stop doing

Stop: Assigning multiple tasks without actively working on them

Because: This misleads the team on which tasks are currently being worked on and which tasks are waiting to be worked on.

Stop: Committing to github infrequently

Because: The rest of the team is unaware of the current progress. This leads to confusion and tasks that are dependent on non-committed code can be delayed.

Stop: Assuming that recipients have received notifications

Because: This has led to periods of non-productivity when one person is waiting for a response in order to do work, but the recipient is in fact unaware that anyone is waiting for their response.

Actions to start doing

Start: Acknowledging receipt of notifications and messages

Because: This will reduce periods of confusion and non-productivity

Start: Keeping up to date with the current communications regarding assigned tasks

Because: This reduces periods of non-productivity and miscommunications among the team

Actions to keep doing

Continue: Submitting designs prior to implementation

Because: This allows for the team to visualize and contribute to the task

Continue: Separating Slack communications by task

Because: This reduces confusion and miscommunication by providing a clear and concise communication history

Continue: Sending Scrum notifications

Because: This allows for all team members to clearly understand scrum meeting times/places as well as allowing for delays or accommodations for team members that have something come up last minute

Work completed/not completed

Work completed:

User Story 1:

- (Task 1) Edit the precious design of option block
- (Task 2) Make filtering function which gets filtering options and returns list of programs or routines that satisfy the options.
- (Task 3) Show filtered result in html page.
- (Task 4) Create view page for single program and routine.
- (Task 5) Manage general data set and parsed data set for programs and routines.

User Story 2:

- Create logic to manage items like exercises and days in front-end.

Work not completed:

User Story 2:

- Design and implement UI page for customization.
- Design and implement page where users can review the result of their customized programs.

Work completion rate

User Stories completed: **1**

Estimated ideal work hours completed: **27**

Days during sprint: **7**

User Stories per day: **0.143**

Ideal work hours per day: **3.86**

Average User Stories per day: **0.0714**

Average ideal work hours per day: **3**
